

Education /Job Relationship

Datasource: ICU Repository(US Census Bureau 1994)
Tools: Python, Microsoft Excel.

The analysis of 32,561 individuals reveals a significant relationship between education level and job type. Here’s a breakdown:

Job Type Distribution by Education Level(highest representation highlighted.)

JOB TYPE	TOTAL(32,561)	LOW ED(<= HS GRAD)	SOME COLLEGE/ASSOC	HIGH ED (> BACHERLORS)
Admin-clerical	3,770	1831	1193	746
Executive-managerial	4,066	821	1315	1930
Prof-Specialty	4,140	295	830	3015
Sales	3,650	1,825	1,095	730
Craft-repair	4,099	2,895	930	274
Handlers-cleaners	1,370	1,096	220	54
Transport-moving	1,597	1,278	255	64
Farming-Fishing	994	884	90	20
Mahcine-op-Inspection	2,002	1,602	340	60
Tech-support	928	185	370	373
Protective-service	649	389	130	130
Armed-Forces	9	5	2	2
Private-house-service	149	119	20	10
Other services	3,295	2,195	830	270

Key Observations:

- Higher education levels are associated with professional and managerial roles(Prof-Specialty, Executive-managerial)
- Some college educatinos common in tech-support and admin-clerical roles
- Lower education levels are linked to manual labor and service-oriented jobs(Handlers-cleaners, farming-fishing, transport-moving)
